

## Hanging Basket Construction

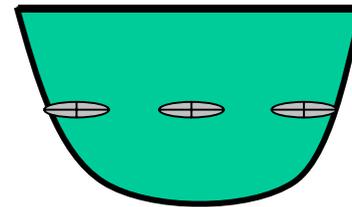

1.

Wire basket (30 to 50cm) with coir insert or sphagnum moss.

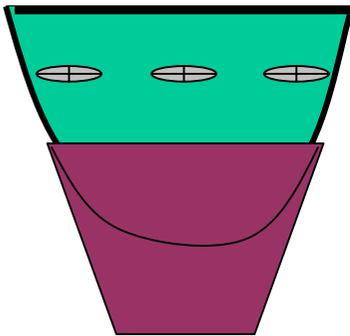

2.

Cut holes as desired in coir.

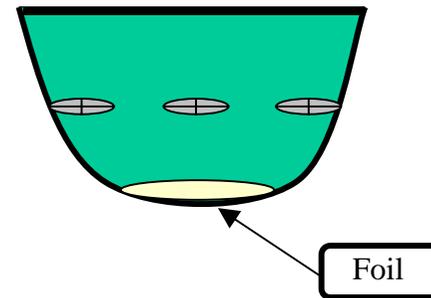

3.

Sit basket on top of a bucket for ease of working on the basket.

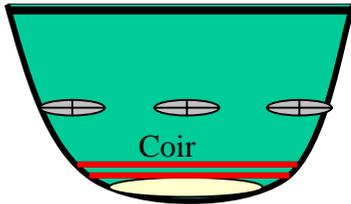

4.

Foil or aluminum pie dish on the inside bottom of the basket to catch water (pie dish ideal).

5. Fill as indicated with soaked coir press down lightly.

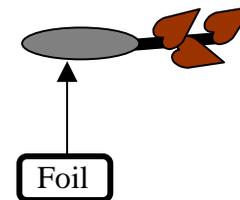

6. Add 2 dozen pellets of Dynamic Lifter on top of coir.

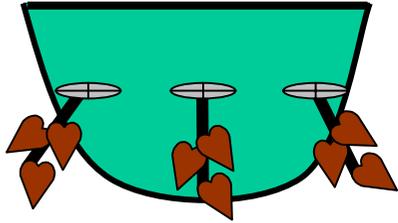

7. Added soaked Easier Wetter granules on top of Dynamic Lifter.

8. Remove some of the soil from the plant roots and wrap them in foil.

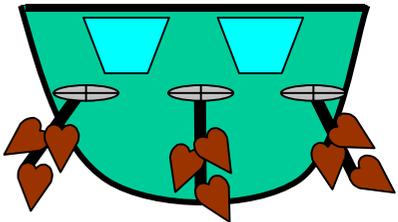

9. Pull the plants through the cuts in the coir side foil first.

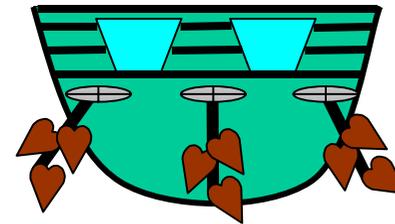

10. As each plant is pulled through the slot form the foil into a cup, this will catch water. Sprinkle plant food into each cup.

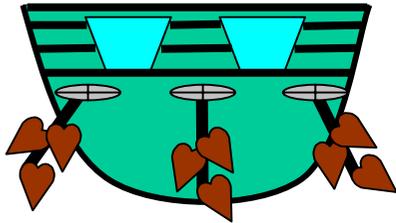

11. Place empty pots as per diagram

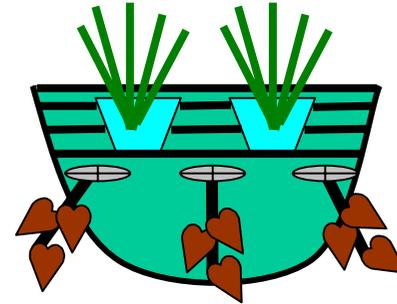

12. Fill around the pots with coir then mix easy wetter (1 Tea spoon) into top of the coir.

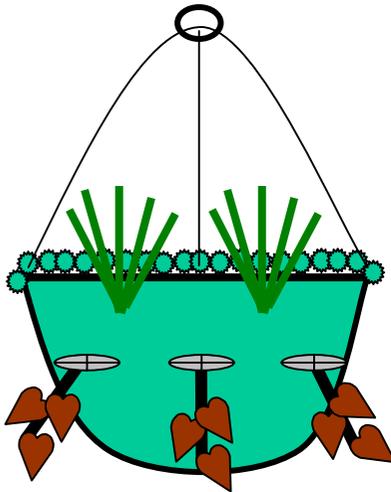

13. Remove pots and sprinkle Dynamic Lifter into the hole left by the pots

14. Plant small palms etc in the holes.

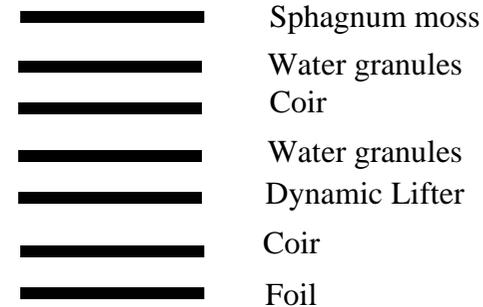

15. Place sphagnum moss around the top edge after planting as many plants as desired in the top. Connect four wire hangers to top edge and hang basket in semi shade until established.

Water the basket well and then once every two weeks with a plant food (as per notes).

16. Layers to make up a basket.

17. Products used:-
- Use a 30 to 50 cm wire basket with coir liner.
  - Seasol for watering.
  - Brunnings Potting mix Coir block.
  - Dynamic Lifter.
  - Water Granules - 1 tea spoon.
  - Debco Tomato Plant Food.
  - Phostrogen.
  - Sphagnum moss

Notes:-

- Water once per two weeks (Half small coke bottle).
- Hang in semi shade until established.
- Pack coir down lightly.
- Use a pie dish or foil for bottom of basket.
